

The goal of our project is to create a painstakingly planned Hotel Management System (HMS) that will increase the effectiveness of hotels and other hospitality-related enterprises. By putting a focus on both operational efficiency and customer pleasure, we hope to transform the way hotels function.

The Hotel Management System's purpose is to streamline daily hotel operations, improve the client experience, and offer strong management capabilities. It is the best option for lodging establishments including hotels, motels, resorts, and inns that want to streamline and automate their operations.

Key Points (Cracked):

Management of guests:

Handle queries, check-ins, and check-outs with ease.

Adapt services to guests' tastes.

Managing a room:

Manage room allocations and availability well.

Keep track of your room's upkeep and cleaning routines.

System for reservations and bookings:

Make it easier to make bookings online.

Streamline all aspects of booking, including modifications and cancellations.

Staff Management:

Efficiently schedule staff and monitor performance.

Handle payroll management accurately.

Billing and Payment Processing:

Generate invoices and simplify check-out.

Accept various payment methods, including credit cards and cash.
