when the user picked option 1, they basically added a new reservation. They entered when they'd arrive, how long they'd stay, and details about the guest. After that, they probably went back to the main menu for more choices.

When option 1 was chosen, the user added a new guest named Rymma Won, providing details like age and phone number. Later, when they selected option 3, it seems they wanted to view all the existing guests. The displayed information might represent a list of various guests' first names, last names, and some phone numbers. This menu allows actions related to guests, such as adding, searching, or displaying guest information.

The user entered commands to navigate a program or system. They checked the availability of room 350, found it available, then accessed the room menu to modify its attributes, choosing to edit a particular aspect, likely the bed size (option 1). These actions seem to manage room details within the system, likely part of a hotel or accommodation management program.

The user selected option 1 to view all reservations. The displayed information seems to show various reservation details like guest names, check-in and check-out dates, the number of nights, room numbers, and the number of people for each reservation. This likely represents a list of multiple reservations within the system, depicting who's staying, when they're checking in and out, and other related details.
